

Deployed App Details: Steps to Access and Test

1. Access the Live Application

- URL: <https://veya-ai-986238160974.us-central1.run.app/app>
- *Note: The application is deployed via Google Cloud Run and is fully responsive (optimized for a mobile-viewport experience on desktop browsers).*

2. Login Credentials

To demonstrate how Veya adapts to different cognitive loads, we have seeded two distinct testing personas. Please use either of the following credentials to log in:

Persona A (High-Stress Executive) * Username: `vaibhav` * Password: `password123` *

Context: Vaibhav is an executive with 6 back-to-back meetings today. He is carrying a high "Energy Deficit" and risks missing dinner with his wife and son (Aanya).

Persona B (Balanced Product Manager) * Username: `test@veya.ai` * Password:

`password123` * *Context:* Meera has a balanced schedule but occasionally needs help protecting her deep-focus work blocks.

3. Step-by-Step Testing Guide

Step A: Explore the "Living Twin" & Family Profile 1. Once logged in, navigate to the **Profile Tab** on the bottom navigation bar (the user icon). 2. Review the basic details, Life Anchors, and the **Household Orbit**. This proves that the AI is not just managing a calendar, but is actively aware of the user's family members (e.g., Vaibhav's wife and his child, Aanya).

Step B: Observe the Proactive Insights (The "Slow Nudge") 1. Navigate to the **Insights (Chart) Tab** on the bottom navigation bar. 2. Notice how Veya has *already* calculated the persona's "Energy Balance" and "Cognitive Load" based on their mock Google Calendar data, without requiring any prompts.

Step C: Trigger the Multi-Agent Orchestrator (Action Cards) 1. Navigate back to the **Chat (Home) Tab**. 2. To see the Action Agent dynamically clear your schedule, type the following

command: *"Make my day free"* 3. **Observe:** Veya will not just respond with text. The Action Agent will intercept the command, evaluate the calendar, and dynamically generate an **Action Card** in the chat UI offering to reschedule your meetings. 4. Click **"Approve & Apply"** on the action card. Notice how Veya handles the logistics in one click.

Step D: Test the Gemini Live Voice Integration (The "Wow" Factor) 1. In the Chat Tab, click the **Pink Phone Icon** in the top right corner. 2. Allow microphone permissions when prompted by your browser. 3. Speak naturally into your microphone (e.g., *"Hey Veya, I'm feeling really burnt out today."*). 4. **Observe:** Veya will respond in real-time using Google Gemini 2.5 Flash Native Audio. Notice how the AI adopts an empathetic, supportive, and human-like tone, validating your stress before offering solutions. 5. Click the red "Hang Up" button to end the call and return to the text interface.

4. Technical Note for Judges

- **Data Persistence:** Because this is a shared live demo environment, the backend SQLite database is refreshed upon server spin-up. If you experience any odd state behavior, simply refresh the web page to re-initialize the pristine test data for Vaibhav and Meera.
